

Instalar wildfly por docker-compose

Nos creamos una carpeta, la abrimos con el terminal y nos bajamos el .yml:

```
estudiante@DAW1: ~/Desktop/wildfly
estudiante@DAW1:~/Desktop/wildfly$ curl -sSL https://raw.githubusercontent.com/bitnami/containers/main/bitnami/wildfly/docker-compose.yml > docker-compose.yml
estudiante@DAW1:~/Desktop/wildfly$
```

Vemos que ya tenemos el yml creado:

Hacemos el docker-compose up en la terminal

```
estudiante@DAW1:~/Desktop/wildfly$ docker-compose up
Creating network "wildfly_default" with the default driver
Creating volume "wildfly_wildfly_data" with local driver
Pulling wildfly (docker.io/bitnami/wildfly:27)...
